

AMENDMENT TO 2017 BWC U.S. CBM RETURN

The United States endeavors to make its annual BWC CBM returns complete, accurate, and transparent. Pursuant to this goal, the US. Government (USG) continually works to improve the process by which information is assembled and reviewed for the CBM. When an error is discovered during this process, the USG will amend the relevant CBM return(s).

ERRATA:

On CBM Supplement of the 2017 U.S. BWC CBM return, the list of microorganisms and toxins for the Lothar Saloman Test Facility was incorrectly updated from the previous year. This facility did not use any reportable microorganisms or toxins in CY2017 and should not be listed in the U.S. BWC CBM Supplement. Additionally, the response to question 5 on Form A, Part 2 (iii) on microorganisms and/or toxins studied at the Lothar Saloman Test Facility should be "None."
